

TROPTIONS Settlement & Escrow Engine

POF, Multi-Asset Clearing, and Issuer Opportunity Framework for UNYKORN BLACK and WhichWay Network

1) Executive Summary: The Settlement Backbone

TROPTIONS is the settlement infrastructure enabling UNYKORN BLACK and the broader WhichWay event ecosystem. The platform provides Proof of Funds (POF) custody, multi-asset escrow, transparent transaction reporting, and issuer tokenization pathways for sponsors and partners.

This document outlines the commercial opportunity for corporate sponsors, merchants, and issuers looking to participate in event mobility and settlement economics - and how TROPTIONS creates trust, compliance visibility, and equity upside for the entire network.

2) What is TROPTIONS Settlement?

TROPTIONS combines regulated escrow custody, multi-chain settlement (USDC, ATP, and partner assets), real-time transaction visibility, and issuer tokenization to create a single trust layer for event commerce and mobility.

- Proof of Funds (POF) custody: Sponsor prepayments and prepaid ride credits held in regulated escrow
- Multi-asset settlement: USDC stablecoin, ATP settlement tokens, and future partner integrations
- Transaction-level reporting: Every ride, sponsorship dollar, and settlement flow is auditable and transparent
- Issuer tokenization: Sponsors and corporate partners can mint equity or performance tokens backed by actual ride volume and sponsor revenue
- WhichWay ecosystem integration: Guest, map, merchant, and emergency modules all report settlement state

3) UNYKORN BLACK Use Case: Why Settlement Matters

UNYKORN BLACK operates with prepaid demand (BlackPass), sponsor commitments (route and vehicle inventory), and account-backed corporate blocks. TROPTIONS provides:

- Pre-event sponsor funds held in custody, releasing only on proof of delivery (rides confirmed, QR scans logged)
- Real-time KPI reporting: sponsors see their vehicle placements, ride volume, and ROI by date, hour, and venue
- Compliance audit trail: every sponsor dollar, every ride, every settlement recorded and auditable
- Fast settlement: sponsor and corporate account charges settle daily to USDC or ATP, reducing operational float

4) POF and Escrow Framework

Proof of Funds is the cornerstone of sponsor confidence and lender certainty. TROPTIONS custody model:

- Sponsor prepayment deposits held in USDC escrow upon contract signature - never mixed with operational float
- Escrow release tied to KPI delivery: minimum ride volume, geographic coverage, compliance checks, and event window performance
- Monthly reconciliation and reporting to sponsors, lenders, and regulatory oversight
- Full chain-of-custody documentation - every transaction ID, timestamp, and settlement proof recorded

TROPTIONS Sponsor Opportunity - Equity & Token Sales

How Sponsors Become Issuers and Capture Upside

5) Sponsor as Issuer: Equity and Token Participation

A Founding Sponsor or Route Sponsor can structure their participation as a tokenized equity or performance share. Instead of a fixed \$150K or \$25K sponsorship spend, the sponsor can allocate capital toward ownership in one or more event mobility verticals.

5a) Equity Issuance Model

- Sponsor invests \$150K in UNYKORN BLACK and receives tokenized equity (e.g., 5-10% revenue share or profit participation)
- Tokens are minted on the Apostle Chain (chain_id 7332) and registered with TROPTIONS settlement engine
- Monthly settlement: UNYKORN BLACK revenue attributed to that route/sponsor tier is calculated, and sponsor token holders receive proportional ATP settlement
- Transferable: sponsor can sell, trade, or hold their equity tokens on the Apostle marketplace

5b) Performance Token Model (Pay-Per-Ride Upside)

Alternative structure: sponsor pays a smaller upfront fee (\$25-50K) and receives performance tokens that earn based on actual ride volume and merchant referrals triggered by their branded inventory.

- Sponsor mints 1,000 performance tokens at \$25 each
- Each ride using sponsor route earns 0.5 ATP per ride (distributed to token holders quarterly)
- Merchant referrals attributed to sponsor signage earn 0.1 ATP per qualified lead
- Token holders can claim their ATP earnings directly to their Apostle Chain wallet or keep compounding

6) Issuer Commercial Terms

TROPTIONS charges 2% settlement fee on all sponsor payouts. Equity and token sponsors benefit from full transparency and monthly settlement.

- Setup: TROPTIONS registry entry + Apostle Chain wallet provisioning + smart contract token mint
- Settlement: daily ride/referral aggregation, monthly ATP calculation and settlement
- Custody: sponsor tokens held in non-custodial Apostle Chain wallets; sponsors own private keys
- Reporting: daily KPI dashboard, monthly settlement statement, quarterly tax-ready reporting
- Transferability: tokens tradeable on Apostle marketplace, no lockup period after minting

7) Compliance and Audit

TROPTIONS settlement is built for compliance and audit. All transactions are recorded on the Apostle Chain (transparent, immutable) and cross-referenced with WhichWay KPI systems.

- SEC framework: tokenized equity and revenue participation structures reviewed for securities compliance
- AML/KYC: sponsor identities verified at token mint time; settlement flows logged and reported
- Tax reporting: monthly settlement statements capture realized gains, losses, and income for 1099/foreign tax reporting
- Audit trail: every ride, route placement, merchant referral, and settlement proof auditable back to source transaction

8) Why Sponsors Choose TROPTIONS + UNYKORN BLACK

Sponsors and issuers benefit from a complete operating stack: real-time event mobility asset inventory, transparent sponsor ROI measurement, and tokenized equity upside backed by actual ride economics.

- No middleman: direct token ownership, no escrow lock-in, daily settlement to your wallet
- Real revenue data: sponsorship ROI is calculated in rides, conversions, and merchant traffic - not guesses
- Liquid asset class: your token is tradeable day one; no 5-7 year lockup
- Network effects: more sponsors = more ride inventory = higher token value for early issuers
- Ecosystem scaling: WhichWay guest flow, demo, passport, and merchant modules all drive sponsor token value

9) Next Steps: Become an Issuer

Sponsors interested in equity or token participation should contact TROPTIONS directly.

- Complete issuer KYC application and commercial term sheet
- Provide capital commitment and token allocation preference (equity model vs. performance model)
- TROPTIONS provisions Apostle Chain wallet and mints token contract
- Settlement begins within 30 days of first UNYKORN BLACK rides under your sponsorship
